“BallotTrack”™ SOFTWARE ENSURES SMOOTH DADE COUNTY ELECTIONS

MIAMI, FL – December 3, 2008 – Dade County Elections Officials could breathe a sigh of relief after recent elections thanks to a ballot tracking software developed by Boca Raton based Wireless Data Systems, Inc. (WDS). WDS’s web enabled BallotTrack™ software tracking technology was instrumental in determining and delivering to each Dade County precinct the correct amount of ballots and ballot type, as well as all necessary voting equipment. WDS serialized bar code labels and wireless hand-held scanners allowed Elections officials, in real-time, to view the status of each precinct’s ballots at every stage for both the primary and general elections.

Using current and historical voting data by ballot style, party, and precinct, BallotTrack™ calculated ballot quantities required for each precinct then electronically communicated the order to the supplier. As ballots were received from the supplier, serialized Bar Code labels were attached to each box of ballots. Scanning the labels generated email alerts to election officials via their desktop PCs and wireless mobile devices allowing them to track all movement from pre-election to post election.

After polls closed, BallotTrack™ scanned the precinct tote boxes containing the voted ballots and attached security seal and bar code labels to each tote. Scanning the bar codes gave Election officials the ability to quickly locate any voted ballots that may need to be audited or recounted. “Providing an end-to-end solution with BallotTrack™ gave the election officials visibility into the processes allowing them to respond proactively when issues needed to be addressed. And when dealing with elections, having the data and tools to respond in a proactive manner is a significant benefit,” said David Whitt, President and CEO of Wireless Data Systems.

Wireless Data Systems, Inc. (WDS) has been successfully providing mobile computing solutions to automate data collection and to manage inventory for numerous well known companies since 1990. For additional information, log on to www.wdsinc.com.
